

BI-BAGLINE®

EASY
TO USE

READY
FOR USE

two bags for anaesthetic therapy

BI-BAGLine®

Technical Data

Volume

ml. 400 + 120

Characteristics

PVC or PVC free container

Disposable

USE

- Infusion of anaesthetics in pain therapy (pre and postoperative);
- Infusion of vitamins in revitalization.

Safety

- Connection and use in aseptic conditions "closed circuit"
- Graduation on the small compartment to allow optimal dosage
- Elimination of the particles produced by the multiple perforation of the rubber caps

Practicality

- Easy to use - Ready for use - Transfer and mixing operations are simplified - Injection point on the large compartment for the introduction of anaesthetics and vitamins

Cost control

- No need for other materials such as bottles, bags, transfer devices - Saving of time for medical and paramedical staff
