

# OZONE THERAPY

BAGS FOR MEDICAL AND PHARMACEUTICAL APPLICATIONS

## OZONE THERAPY

Oxygen-ozone therapy is a consolidated and widely spread method thanks to its great benefits.

It is documented by years of research and clinical and scientific experience, performed in many countries worldwide.

This treatment determines a clear improvement of numerous pathologies and sometimes allows their complete recovery.

Oxygen-ozone therapy is performed in 3 different ways:

### Injection:

Done with a syringe endowed with a painless needle, injecting an oxygen-ozone blend to the specific body area.

### By contact:

Through cylinders, bell-shaped or proper plastic applications, the oxygen-ozone blend is brought to contact with the specific body area.

### Small Autohemo Infusion:

With a syringe, performing an intramuscular injection of a small quantity of one's own ozonized blood.

### Major Autohemo Infusion or Autohemo therapy with oxygen-ozone:

A quantity of blood, according to the doctor's decision, is drawn of the patient to a bag, and mixed for a pre-established time with a proper quantity of oxygen-ozone and reinjected to the same patient.

The application fields are many, and include medicine, sports and cosmetics.

In medicine, autohemo infusion is mostly used for:

### Oxygenation:

For diseases which demand a greater tissue oxygenation, such as Diabetes Mellitus, Ulcers, Atherosclerosis, Parkinson's disease, Arthrosis, Venous insufficiency, Raynaud disease, Periperal artery disease, etc.

### Immunodeficiency:

For diseases connected or motivated by the immune system such as Aphthous ulcer, Furunculosis, Acne, Viral hepatitis, Chronic hepatitis, active or persistent from a previous viral infection.

### Immunity variation:

For diseases which need an adjustment of the immune system, such as allergies (Allergic rhinitis, Bronchial asthma) and food intolerance and all the autoimmune diseases: Rheumatoid arthritis, Lupus erythematosus, Scleroderma, Sjögren's syndrome, Multiple sclerosis (MS), Burger Disease, etc.
